

Product Range Overview

LME7...

LME7s are used for the startup and supervision of multistage or modulating oil or gas burners in intermittent operation. The flame is supervised with an ionization probe, a QRI infrared flame detector, or a QRA UV flame detector. Yellow-burning flames are supervised with QRB1/QRB3 photoresistive detectors or a QRB4 yellow flame detector, and blue-burning flames with a QRC blue flame detector.

- Applications in accordance with EN 267: Forced draft burners for liquid fuels
 - Type-tested and approved in accordance with DIN EN 298
 - Applications in accordance with EN 676: Automatic forced draft burners for gaseous fuels

Features of the LME7:

- Undervoltage detection
 - Air pressure supervision with functional check of the air pressure switch during startup and operation
 - Electrical remote lockout reset facility
 - Multicolor indication of fault state and operating state messages
 - Restart limitation
 - Accurate control sequence thanks to digital signal handling
 - Controlled intermittent operation after 24 hours of continuous operation

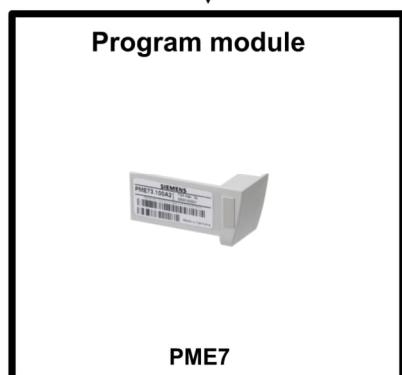

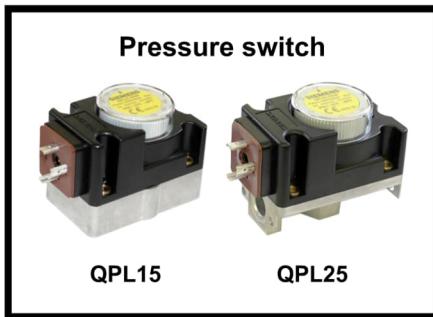

Documentation

This documentation provides an **overview** of the product range.

Target groups

- Sales teams
 - In-house staff
 - Burner specialists

Product Range Overview

Burner control

LME71/LME72/LME73

Parameterized burner control for the supervision of multistage or modulating forced draft oil/gas burners and atmospheric burners of medium to large capacity in intermittent operation. With controlled air damper control.

Note

The operating mode depends on the flame detector used.

Product presentation (continued)

UV flame detector

QRA2 (only LME71/LME73 or LME76 with LFS1.21)

UV flame detector for the supervision of gas flames and yellow or blue-burning oil flames as well as for ignition spark control. Plastic insulated housing, metalized to prevent static charging caused by the air flow from the fan, lateral illumination.

QRA4 (only LME71/LME73 or LME76 with LFS1.21)

UV flame detector for the supervision of gas flames and yellow or blue-burning oil flames as well as for ignition spark control, metal housing, frontal illumination.

QRA7 (only LME75)

UV flame detector for use with Siemens burner controls for the supervision of gas and oil flames.

QRA10 (only LME71/LME73 or LME76 and LFS1.21)

UV flame detector for the supervision of gas flames and yellow or blue-burning oil flames as well as for ignition spark control. Detector housing made of injection molded aluminum with a 1" mounting coupling and connection facility for cooling air.

Photoresistive detector

QRB1 (only LME71/LME72/LME73)

Photoresistive detector for use with Siemens burner controls, for the supervision of oil flames in the visible range. The QRB1 is primarily used in connection with burner controls for burners of small capacity.

QRB3 (only LME71/LME72/LME73)

Photoresistive detector for use with Siemens burner controls, for the supervision of oil flames in the visible range. The QRB3 is primarily used in connection with burner controls for burners of small capacity.

Yellow flame detector

QRB4 (only LME71/LME72/LME73)

Yellow flame detector for Siemens burner controls, for supervising oil flames in the visible range. The QRB4 is used in connection with burner controls for oil burners in intermittent operation.

Blue flame detector

Frontal illumination:

QRC (only LME71/LME72/LME73)

Blue-flame detector for use with Siemens burner controls, for the supervision of blue and yellow-burning oil or gas flames. The QRC is primarily used in connection with burner controls for burners of small capacity.

Lateral illumination:
