

Map Your Al Use Cases by Opportunity

Ready the IT team to drive success.

Act now to get your organization AI ready

As your organization looks to capture the opportunity of AI, it's key to decide and articulate

early the type and extent of your AI ambitions — in particular, whether you:

- Intend to go beyond everyday AI productivity gains and seek game-changing impact and disruption
- Are willing to put AI in front of customers and/ or want to keep it behind the scenes to supercharge operations

Gartner designed an AI Opportunity Radar to help

you map your AI ambitions. Use this powerful visual to help executives explore and commit to different AI opportunities. IT leaders are key stakeholders in these conversations

and should work with executive peers to set Al ambition early and revisit it frequently as the

Al landscape changes.

They also play a critical role in solidifying three pillars of AI readiness:

Al-ready cybersecurity

2 Al-ready data

3 Al principles

By 2025, generative AI will be a workforce partner for **90% of**

companies globally.

Typical AI ambitions that enterprises are currently pursuing

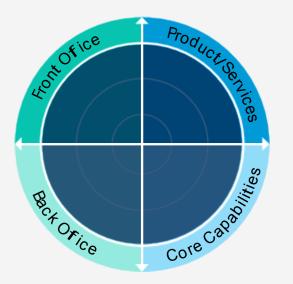

Productivity pursuers

- Al used primarily to augment and automate front and back offices.
- May cautiously use AI

Not in front of my customers

- Al primarily used internally.
- No intent to put AI in front of customers.

Al first/everywhere

- Al opportunities pursued broadly close to customers and internally
- across the organization.

Map Your AI Use Cases by 3 Opportunity

Ambition is great, but feasibility is key

The three rings of the radar represent the levels of feasibility and are a combination of three dimensions:

Technical feasibility

The organization's ability to

obtain and implement the

Internal readiness

External readiness

The organization's abilityThe extent to which customers/and openness to utilize andpartners and any external partiesincorporate the use caseare accepting of AI

Compining these dimensions yields an overall feasibility score:

technology

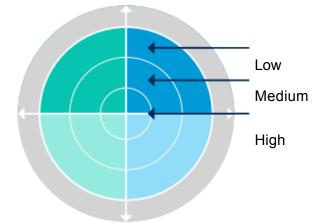

High feasibility (inner ring). The technology is ready, relatively inexpensive and blends nicely into the existing workflow, making it easy for employees to adopt. These use cases have a low barrier to adoption and are, therefore, a good starting point but won't provide a competitive

advantage.

Medium feasibility (middle ring). The technology is not as mature and often comparatively more expensive. Some enterprises will choose to pursue these because of an early-adopter/ fast-follower competitive desire.

Low feasibility (outer ring). The technology is unproven — markets and employees will need much convincing. Competitively aggressive enterprises that want to drastically transform

the whole (or parts of the) enterprise and/or disrupt the industry before others will seek to implement a few of these use cases.

Feasibility is combination of:

- Technical feasibility
- · Internal readiness
- · External readiness

Use the Gartner Al **Opportunity Radar to** map your Al ambition

Everyday AI enables you to boost productivity and remove drudgery for your teams and your customers. It will not, however, give you a sustainable competitive advantage.

Game-Changing AI enables you to reinvent core capabilities and create entirely new products and services.

It has enormous potential to help you gain a competitive advantage but is far more costly and risky.
