

Normal childhood nutrition

正常小儿营养

汕头大学医学院第二附属医院儿科 李伟中

4小儿营养需求及母乳喂养

Nutritional requirements

营养需要

- A satisfactory dietary intake should meet the normal requirements of the following

下列是良好的饮食摄入的正常需求量

- Energy
- 能量
- Lipids
- 脂类
- Carbohydrate
- 碳水化合物
- Protein
- 蛋白质

Nutritional requirements

营养需要

- A satisfactory dietary intake should meet the normal requirements of the following

下列是良好的饮食摄入的正常需求量：

- Vitamin
- 维生素
- Macroelement
- 常量元素
- Trace elements
- 微量元素
- Water
- 水
- meal fiber
- 膳食纤维

Energy

能量

- The major determinants of energy expenditure:

能量消耗的主要决定因素

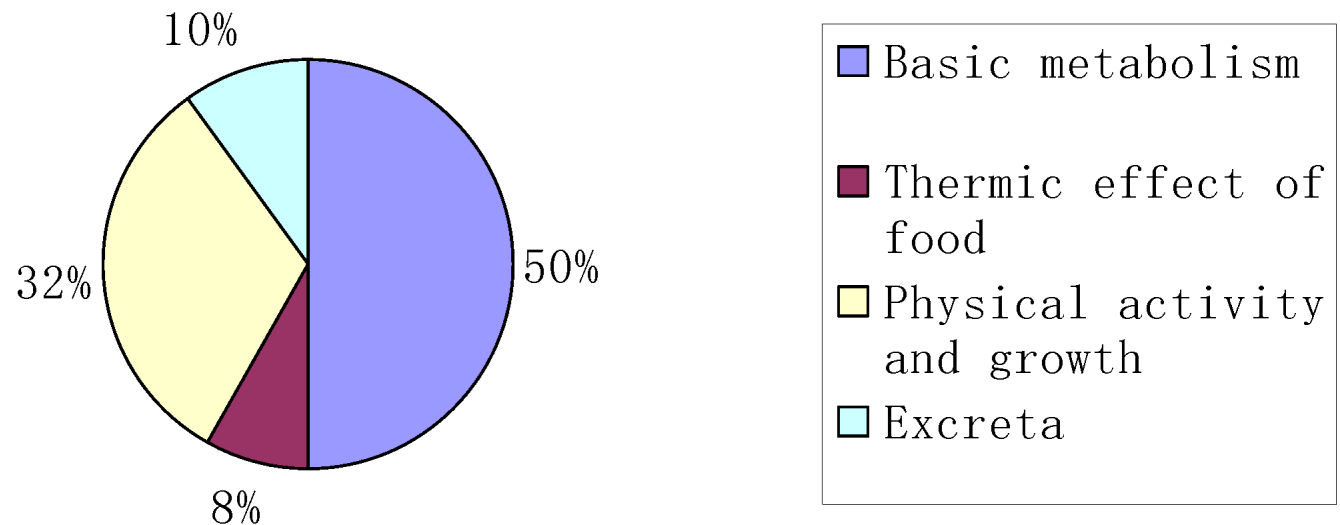

- Basic metabolism
- 基础代谢
- Thermic effect of food
- 食物热力作用
- Physical activity
- 活动消耗
- Excreta
- 排泄消耗
- Growth
- 生长所需

Energy expenditure

能量消耗

energy expenditures

Total energy need

总能量需要

<1y	100~120 (average 110) Kcal / kg / d
1~3y	100 Kcal / kg / d
15y	50~60 Kcal /kg / d

Distribution of Calories

热卡分布

Protein 蛋白质	Lipid 脂肪	Carbohydrate 碳水化合物
15%	35%	50%
(4 Kcal / g)	(9 Kcal / g)	(4 Kcal / g)

Infant feeding

婴儿喂养

- Incorrect, inadequate and/or overfeeding can all be harmful.

错误的喂养方式、喂养不足、过度喂养都是有害

- Forms of Feeding 喂养方式：

i . Breast Feeding 母乳喂养

ii . Bottle/Artificial Feeding 人工喂养

iii . Addition of Solids 添加辅食

Breastfeeding

母乳喂养

- This is the preferred method for most infants. In general, there is no doubt that **breast is best.**
- 母乳喂养是大多数婴儿的首选，母乳无疑是最好食物

Breastfeeding

母乳喂养

- Breastfeeding in early infancy may be life-saving in developing countries, and is subject to fashion and custom in developed countries.
- 在发展中国家，母乳是婴儿早期救命的食物
在发达国家，母乳喂养容易受到流行时尚与习惯的影响

Advantages of breastfeeding

母乳喂养的优点

- Quality
 - Anti-infective properties
 - secretory IgA,
 - lysozyme,
 - phagocytic cells,
 - lactoferrin(iron-binding agent), promotes growth of non-pathogenic flora
- 特点
 - 抗感染特性：
分泌型IgA、溶菌酶、乳铁蛋白（铁螯合能力）、
促进非致病菌生长
