中学生关于环保英语 篇 1

hello! i wonder whether everybody knows the meaning of these two words of “ energy-conservation ” and “ low carbon ” ? i assume as a matter of course and know. does “ energy-conservation ” save the energy? does “ low carbon ” reduce carbon emission? yes, it is really simple. we often chat about them. but, do you really

understand them? have they really taken root on your bottom of heart deeply?

once, the earth mother left our rich energy to cause us to be jubilant, sighed on earth's energy inexhaustible, inexhaustible, now, the newest statistics indicated, the petroleum will dry up after 60 years, the coal also might supply the humanity to use for 250 years; once, developed first, the environment question the situation which neglected is often occurred, now, the sustainable development, was together harmoniously with the nature the biggest topic. not difficult to see, the environment question in is taken unceasingly by the people. for all this, the environment question was still stern, the energy conservation reduced the platoon, the low-carbon lives

imminently. at the copenhagen climate congress, this affects the human destiny the question slowly to be unable to reach the agreement actually. in the life, is driving the great displacement automobile, purchases including the fluorine air conditioning, the refrigerator, including the phosphorus laundry powder, turns on the air

conditioning the low temperature also one side to bind in the summer the quilt, the daylight lamp is being long all night

clearly, water cock water drop sound day and night not rest these influence environment phenomenon common occurrence. this is rebels with ours position. american president kennedy has said: do not have to ask the

country can make any for us, must ask first oneself can make any for the country. the low-carbon life needs everybody to participation! the low-carbon life first is one kind of life manner. so long as wants, each person may be able to achieve! the electricity saving, saves gas and oil, the solar terms, saving water, the tree-planting, makes use of waste, by step generation of vehicle the

intravenous drip, in life each aspect, all may choose the low-carbon life the manner. the low-carbon life is also representing one kind healthily, the more natural life style. little eats counter-season food, the generation by works as season food; little uses the

disposable product, the generation by the duplicated things; little rides an overhead traveling crane, little sits one time the elevator, the generation rides the bicycle, crawls the staircase, while falls the low-carbon withdrawal, we will have a healthier body and mind. we believed, so long as everybody works as one, participation together, humanity's tomorrow certainly will be able to be happier! schoolmates, today, your low-carbon?

中学生关于环保英语演讲稿 篇 2

Ladies and gentlemen,

I am honored to stand here to share with you on such a important subject as climate change. Yes , it is global warming .

Let me give you two phenomenons.

Here is the first one. More and more people used to be using air condition, but how many people ever thought whether this new ?hobby? will bring side-effects or not? Maybe just few

people. In fact, the side-effect is apparent. The emissions of gases exhausted from air conditioning contain a lot of methane(这里可以停顿一下)which could cause global warming. By the way, air conditioning will waste a lot of electricity .

The second one is about the increasing amount of cars. According to the statistics, in 21st century, there are 7 millions cars in the world, a large amount of exhaust gases has seriously influenced us, such as: cough, throat inflammation.

This two phenomenons are just few part of reason which change our environment badly. There are many other reasons.

In nearly 100 years, the average global temperature experienced twice fluctuations which is “cold-warm-cold-warm”. Generally, it is the trend that global climate is becoming warmer and warmer . In 1980s, global temperature rised apparently. According to Chinese scientists, the average temperature in China has risen by 1.1 degrees

centigrade in the last 5 decades. It is higher than the reported global average. We are seeing more frequent bouts of extreme weather in many parts of the country. For example, last spring, the most severe drought in 50 years hit northern China affecting the livelihood of 4 million people. Environmental damage and climate change is a reality for us. Out of the world?s most polluted 20 cities, half are in China, 70% of Chinese rivers are polluted . China has become the largest carbon emitter of the world.

It is really thought-provoking(发人深省). Who pays for it? First, as the pace of human high-tech development process goes quiker and quiker, the side-effects with the science development reflected, global warming is one example. more and more greenhouse gases with the development of economy are being

discharged into the air. About 70% of the greenhouse gases has been composed of carbon dioxide, which is considered as one of the greatest causes of global warming . It has harmful effects, causing the sea level to raise and many natural disasters to strike. On the other hand , scientists in one wave after another try to awaken us to the growing threat of global warming. But many countries tend to turn a deaf ear(充耳不闻) to the scientists' warnings. In fact, the earth's atmosphere is definitely being warmed and the problem is largely man-made. A wise way is that we should get moving to protect ourselves. So the public demand that all nations should take strong measures to prevent the increase of the earth's temperature.

In my opinion, it is the high time for us to take action. In order to save the earth, we should try to do things below: no air conditioning, use recycled paper, abandon meat food, don't use plastic bags, take a bus. It is little drops of life. As long as everyone takes action, it will be a powerful strength to rescue our planet. All countries are supposed to take the legislative initiatives soon as possible. Only in this way can the global warming be put under control.

中学生关于环保英语演讲稿 篇 3

My honorable judges:

With the high level of development of technology today, our lives have become more and more comfortable, wearing beautiful clothes, eating delicious food, and playing with modern toys. Most of us think that we human beings are the cleverest of all the animals around the world. Sure there is no doubt that we are wise. We have created a large number of successful things. On the other hand, we are also destroying the environment and bringing death to many kinds of animal.

No man is an island. Entire of itself. Each is a piece of the continent.

There is no hope for human being if we continuous killed animals tomorrow. Yes, It's time to do something to save dolphins, animals, and human beings. Let's join our hands together to make the world better!

Thank you very much for your attention.

中学生关于环保英语演讲稿 篇 4

We live in the beautiful earth, it's a pity that the earth is every day under the various odor, chemical items, poison, carrion, automobile exhaust, living garbage, factories and so on dirty garbage pollution, make our lovely earth gradually degradation. So to protect the environment is the duty of every man.

Plants and trees is human natural oxygen "manufacturer". But the deforestation, the destruction of the ecological balance of nature; Sand dunes to gobble up the fertile land, white; Floods can be our lovely home. Relentless stuff we clear the river becomes cloudy. Dense forests become sparse clutter, the blue sky become dark, green mountains become bald. Mud-rock flow, dust storm, flood... These disasters are caused by a dirty environment. So we should protect the environment.

How to protect the environment? First of all, can't litter, saw rubbish pick up, is the environment become clean and beautiful. Second, do not arbitrarily trample flowers and plants trees. To plant trees, a variety of flowers and plants.

Electricity, bring us all kinds of convenience, especially gives us light, lit up the colorful world. But we want to save electricity, because electricity is mostly produced by burning coal. Save electricity is to save from coal, less waste, and only enough storage of coal mining in our country in one hundred years! We

think, more than one hundred years later, our children and grandchildren to do? So we should save electricity, the usual lamp, use energy-saving light whenever possible.

Protect the environment, everyone duty. Let's start from me, start from now, start from the side of dribs and drabs.

我们住在美丽的地球上，可惜地球每天都饱受着被各种臭气、化学物品、毒汁、腐尸、汽车尾气、生活垃圾、工厂垃圾等等肮脏污染，使我们可爱的地球逐渐退化。所以保护环境是每个人义不容辞的责任。

花草树木是人类的天然氧气“制造厂”。但人们乱砍乱伐，使大自然的生态平衡遭到了破坏；沙丘吞噬了万顷良田；洪水冲毁了我们可爱的家园。无情的杂物把我们清澈的河水变得浑浊。茂密的森林变得稀疏杂乱，蔚蓝的天空变得灰暗，碧绿的青山变得光秃。泥石流、沙尘暴、水灾……这些灾害，都是由肮脏的环境造成的。所以我们更应该保护环境。

如何才能保护环境呢？首先，不能乱扔垃圾，看到垃圾就捡，是环境变得整洁优美。其次，不要任意践踏花草树木。要多植树，多种花草。

电，给我们带来各种便利，特别是给我们带来了光明，照亮了五彩缤纷的世界。但是我们要节约用电，因为电大多是烧煤产生的。节约用电就是节约用煤，少排废气，而在我国储藏的煤只够开采一百多年了！大家想想，一百多年以后，我们的子孙后代该怎么办？所以我们要节约用电，平时的照明灯，尽可能用节能灯。

保护环境，人人有责。让我们从我做起，从现在做起，从身边的点点滴滴做起。

中学生关于环保英语演讲稿 篇 5

As we all know, the environment around us is getting worse and worse. In some places, we can't see fish swimming in the river or trees on the hills. Some people even have no clean water to drink.

So I think we must do something to protect the environment.

But what can we do? How to protect our environment? For example, we can go to school on foot or by bike.

We can use shopping baskets not plastic bags when we go shopping, and we can use both sides of the paper when we write. In a word, if everyone pays more attention to our environment, there will be less pollution and our life will be better.

“There is only one earth”, I hope everyone will protect our environment well.

众所周知，我们周围的环境越来越差，在一些地方，我们看不见鱼在河里游泳或在山上爬树。有些人甚至没有干净的水喝。

所以我认为我们必须做些什么来保护环境。但是我们能做什么呢？如何保护我们的环境？例如，我们可以步行上学，也可以骑自行车上学。

当我们购物时，我们可以使用购物篮而不是塑料袋，当我们写字时，我们可以使用纸的两面。总之，如果每个人都更加关注我们的环境，就会减少污染，我们的生活会更好。

“只有一个地球”，我希望每个人都能很好地保护我们的环境。

中学生关于环保英语演讲稿 篇 6

Although the 20__ Olympics are still three years away, another special competition has already started in Beijing. This time, the competitors are not the athletes from all over the world, but the people living in Beijing. The special competition is held in a stadium, but in every street and every corner of Beijing. I suppose some of you may have already guessed what the special competition is. Yes, it is the competition of protecting our environment and creating a green Beijing for the 20__ Olympic Games.

Someone may ask who is our rival in this competition? The modern Los Angeles, the charming Sydney, or the historic Athens? No, none of them. The real rival is ourselves. It is our bad habits

of neglecting to protect environment in our daily life.

Several years ago, I was very lucky to have an opportunity to live in the United States for about two years. I not only enjoyed the beautiful environment there, but also appreciated the American peoples active way of protecting their environment. Now, whenever the environment protection is mentioned, a beautiful view of California will arise in my mind: white clouds flying across the blue sky, green grass plot sprinkled with colorful flowers and small animals playing happily among the trees.

I remember that at the beginning of my coming to America, I often went to my fathers working place, the United States Geological Survey, to have fun. Each time I found a lot of people riding bicycles to their offices. Among the cyclists, an old man with white hair attracted my attention. Curiously, I asked my father, "Why does the old man ride his bike to work every day? Doesnt he have enough money to buy a car?" Father laughed, "No, not because of money. Actually, he is one of the greatest scientists in the world. He can afford to buy a motorcade if he likes. He is just an environmentalist and usually doesnt drive unless going shopping, or in bad weather. In America, there are a lot of environmentalists, who actively protect their environment. For example, in Palo Alto city we are living now, there is even a bicycle-to-work day on May 19th every year to encourage people to decrease air pollution caused by cars".

Later, I also learnt another interesting fact of environment protection there. In some states of America, in order to decrease air pollution, save energy and reduce traffic jams, state governments encourage people to take buses to work or to share a car among several people. They even set special "diamond lanes" in some main streets, which are only for the vehicles with

2 or more people.

The positive actions of American people and the effective measures the American government takes in environment protection fully won my respects and deeply affected my consciousness in environment protection.

When I was back in China, people often asked me: "What do you think of America?" I always bolt out: "Wonderful, especially the beautiful environment." Frankly speaking, after several years, the faces of my American teachers and friends have gradually faded away from my mind, but the blue sky, green grass and lovely animals in California often arise in my mind, and became my dream of visiting there again.

The 20__ Olympics provide us with the opportunity to publicize and practise environment protection in Beijing. Is it possible for Beijing to Is it possible for Beijing to become as beautiful as California? The answer is "yes", but the dream needs every Beijing citizens full support and active moves to accomplish.

From now on, if every student who is driven to school can take bus or ride bicycle to school once a week, if every car owner goes to work in a car pool once a week, we can make a difference. If everyone can actively protect the environment in our daily life, the blue sky, green grass and lovely animals in Californiawill appear in Beijing.

Tiny streams can combine into a vast ocean, small trees can together be an immense forest. Beijing is often described as a beautiful and aged picture. If every Beijing citizen adds a trait of green on the picture, the whole Beijing will become an ocean of green. Let us unite together to win the competition of environment protection in Beijing, and present the world a big gold medal. That is "Green Beijing, Great Olympics "

中学生关于环保英语演讲稿 篇 7

In recent years, the global warming gets increasingly attention. More and more people make contribution to stop the global warming. Therefore, a new lifestyle occurs--low carbon life. What can we do to live in low carbon?

近几年,全球气候变暖越来越得到关注.越来越多的人为阻止全球变暖做出贡献.因此,一种新的生活方式诞生了——低碳生活.在低碳生活中我们能够做些什么呢?

First, remember to turn off lights and turn off the faucet when you do not need to use. Use the energy-saving lamps. There are many small things we can do to save resources. Second, when we go out, take public transport as much as possible to reduce gas emissions and to ease the transporting pressures.

首先,当你不需要用电和水的时候,记得把灯和水龙头关掉.使用节能灯.我们能够做很多小事来节省资源.其次,当我们外出的时候,尽可能乘坐公共交通以减少气体排放和缓解交通压力.

All in all there are many other things we can do to live in the low carbon life. It needs us to do something practically. If everyone can keep this lifestyle from now on, it will greatly change the situation and our home would be more beautiful.

总之,为了低碳生活,我们能够做很多事.它需要我们做出一些实际行动.如果每个人能够从此刻起持续这种生活方式,状况将得到很大改善,我们的家园会变得更美丽.
